

COME SI FORMA LA NEBBIA?

La nebbia

è come

una nuvola

che si forma

vicino

al terreno.

Si forma

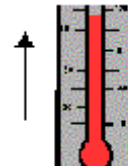

quando

l'aria

umida

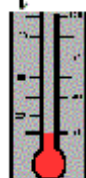

più calda

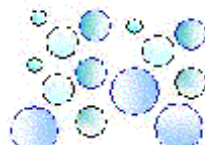

passa sopra

il terreno

freddo.

In questo modo, l'aria si raffredda e il vapore

acqueo

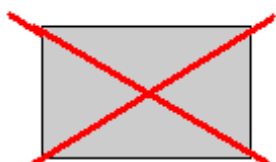

si trasforma in goccioline. Ecco che si forma

la nebbia.

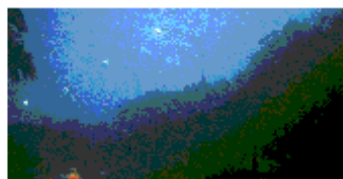

La nebbia

non fitta

si chiama

foschia.
