

CHE COS'E' L' OMBELICO ?

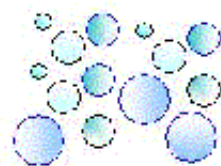

Quando eri nel pancione della tua mamma

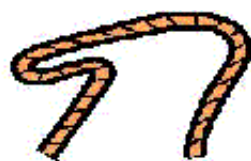

un cordone ti univa a lei.

Era un cordone di vasi sanguigni che ti portava

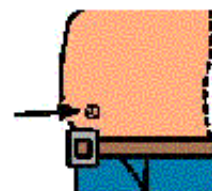

il sangue della mamma con ossigeno e nutrimento.

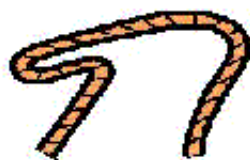

Appena nato il cordone è stato tagliato dai medici,

perché tu potevi respirare e succhiare il latte

della tua mamma anche da solo e l'ombelico è ciò che rimane

di quel cordone.
