

## COME SI RICAVA LO ZUCCHERO

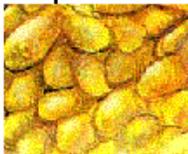

La barbabietola è una radice, assomiglia a una grande patata.

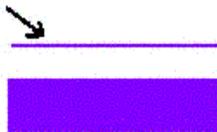

Si semina in primavera e si raccoglie in autunno,

dopo viene portata negli zuccherifici, dove si ricava lo zucchero.

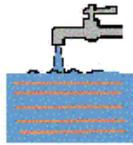

Le barbabietole vengono lavate, poi tagliate

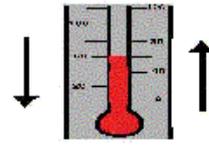

a fettine sottili: le fettucce.

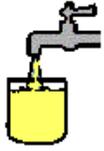

Le fettucce

vengono messe in acqua

tiepida

che si riempie

di zucchero.

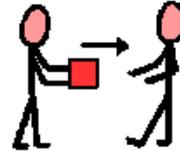

Le fettucce

senza

zucchero

vengono date

in cibo

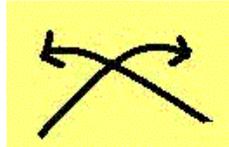

agli animali.

Il succo di zucchero

lavorato

si trasforma

in sciroppo color bruno

e dopo ,

ancora

lavorato ,

in zucchero .
